

tel:+pin

for  Microsoft®
Lync Server 2010

Positive Identification | Secure Access | Accurate Accountability | Reduce Cost

"Implementing tel:+pin in our organization helped us curb international dialing abuse from common areas such as Meeting & Conference Rooms as well as open office spaces. Not only are users required to authenticate to place an international call, but the call is billed to their extension."

— **Ahmad Mshainesh**

IT Director,
Al Yah Satellite Communications
Company PrJSC
(Yahsat)

"At IRENA the greatest challenge we were facing with our Lync IP Telephony Solution was call accounting for Meeting & Conference Rooms. tel:+pin solved this problem, allowing our users to place the calls they need to while ensuring the correct user / cost-center remains accountable."

— **Ali Nimer**

CIO,
International Renewable Energy
Agency (IRENA)

Managing telephone costs presents a continuous challenge to Organizations.

Driven by the increasing demand to operate in a Global Market the necessity to permit employees to place international calls is on the rise resulting in new challenges and requirements to secure Corporate Telephony Solutions against unauthorized use and potential abuse from both internal and external parties.

The challenge is multiplied in Open Office areas or Corporate Facilities such as meeting rooms and conferencing rooms where devices are deployed with less restrictive dial-plan policies and can remain un-secured and un-manned for extended periods.

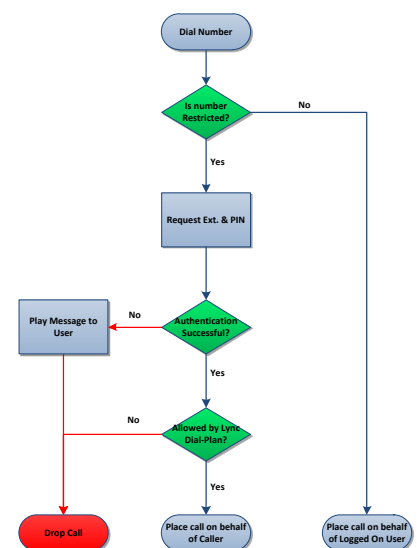

tel:+pin helps organizations reduce the overall cost of their telephony solution by preventing unauthorized usage of the corporate telephony system.

Organizations that use **tel:+pin** have the ability to require positive caller identification when calls are placed to certain destinations (such as International Numbers or Premium Service Numbers) and ensuring that the call is accounted to (and therefore billable to) the user placing the call.

Using **tel:+pin** any user that is successfully authenticated (and authorized by the corporate dial-plan) can place a call to a restricted number from any telephony endpoint in the Organization.

Features:

- Customizable Restricted Number List.
- Require Authentication to call Restricted Number.
- Authentication bypass for specific Users.
- Call Accounted to Authenticated Caller not Logged-On User.
- Maintain Lync Dial-Plan and Call-Policies of the Caller.
- Lync Native Call Control.
- Support ALL Lync Voice End-Points.
- Support both Internal and External (Lync Edge) Users.
- Silverlight Management Interface.
